

Watermead, Aylesbury

Light Symphony Solution

The 4-Channel lighting controller allows the lighting to be zoned in various ways to suite the project & occasion.

The lighting controllers can make use of the existing mains supplies.

We would suggest adding the (indoor) base-station that includes 6 individual timers and an astronomical clock for dusk/dawn control, with the option of WiFi to enable the iPhone/iPad apps. This unit fully utilises the controllers in the garden allowing you to automate the lighting even when you are not around.

The timers could be functional – for example keeping a pump operating to aerate a pond whilst you are on holiday, or theatrical to time a light show.

It can also be used for example, to switch lighting on at DUSK at full brightness but then switching it off or to a lower level after midnight etc. so as to reduce glare, extend lamp-life and save power. It also takes care of the hours springing forward & back and tracks dusk time geographically.

Select from a wide range of control options, including;

- A long-range Remote Control providing simple walk-about zone control with dimming.
- A wall-mounted, wireless, picture touch-panel providing a simple and convenient override of each zone from inside the property.
- 'iSymphony' app running on a Smartphone or tablet device (free download for Apple, Android or PC/MAC)

Long-range Remote

2 or 4 zone keyfob
